## AME 3623 Real-Time Embedded Systems
## Final Exam
## May 8, 2019

General instructions:

- Please wait to open this exam booklet until you are told to do so.

- This examination booklet has 14 pages. You also have been issued a bubble sheet.

- Write your name, university ID number and date, and sign your name below. Also, write your name and ID number on your bubble sheet, and fill in the bubbles for your ID.

- The exam is closed book, notes and electronic devices. The exception is that you may have one page of personal notes (double sided).

- The exam is worth a total of 274 points (and 20% of your final grade).

- You have 2 hours to complete the exam. Be a smart test taker: if you get stuck on one problem, go on to the next.

- Use your bubble sheet to answer all multiple-choice questions. Make sure that the question number and the bubble row number match when you are answering each question.

On my honor, I affirm that I have neither given nor received inappropriate aid in the completion of this exam.

**ID Number**: _____  **Date:** _____

| Question | Points | Score |
|---|---|---|
| Number Representations and Operations | 45 | |
| Circuits | 48 | |
| Circuits and Code | 46 | |
| Control | 24 | |
| Interrupt Service Routines | 29 | |
| Serial Processing | 13 | |
| Digital-Analog Systems | 28 | |
| Finite State Machines | 41 | |
| Total: | 274 | |

Part I. Number Representations and Operations

1. (6 points) What is the hexadecimal value of $c$ after the following code is executed?

```
uint8_t a = 0x27;
uint8_t b = 0x12;
uint8_t c = (a & 27) | b;
```

A. 0x12    B. 0x13    C. 0x27    D. 0x37    E. Answer not shown

2. (5 points) What is the binary representation of $a$ after the following code is executed?

```
uint8_t a = 0xA2;
```

A. 1010 0010    B. 1010 0100    C. 1100 0010    D. 1100 0100
E. Answer not shown

3. (6 points) What is the representation of $5\frac{1}{8}$ using "12.4" fixed-point? Give your answer in hexadecimal.

A. 0x0029    B. 0x002A    C. 0x0051    D. 0x0052    E. Answer not shown

4. (6 points) What is the hexadecimal value of $c$ after the following code is executed? Assume a "4.4" fixed-point representation.

```
uint8_t a = 0x33;
uint8_t b = 0x21;
uint8_t c = fixed_point_add(a, b);
```

A. 0x05    B. 0x40    C. 0x54    D. 0x540    E. Answer not shown

5. (6 points) What is the hexadecimal value of $c$ after the following code is executed? Assume a "6.2" fixed-point representation.

```
uint8_t a = 0x23;
uint8_t b = 0x2;
uint8_t c = fixed_point_multiply(a, b);
```

A. 0x11    B. 0x18    C. 0x46    D. 0x118    E. Answer not shown

6. (6 points) What is the decimal value of $b$ after the following code is executed?

```
uint8_t a = 8;
uint8_t b = 7 * (a / 10);
```

A. 4    B. 5    C. 5.6    D. 6    E. Answer not shown

7. (5 points) What is the range of values that are representable by a signed, 4-bit integer?

A. $[0 ... 7]$    B. $[0 ... 15]$    C. $[-8 ... 7]$    D. $[-16 ... 15]$
E. Answer not shown

8. (5 points) What is the binary representation for -42? Assume a signed, 8-bit integer.

A. 0010 1010    B. 0100 0010    C. 1101 0101    D. 1101 0110
E. Answer not shown

Part II. Circuits
Consider the following circuit:

**Vin**

**2V**

**L**
Assume that $L$ is a logical value.

9. (5 points) If $V_{in} = 6.5\ V$, what is $L$?
   A. True    B. False    C. Answer not shown

10. (5 points) If $V_{in} = 2.5\ V$, what is $L$?
    A. True    B. False    C. Answer not shown

Consider the following circuit:

**V3**

**V1**    —ww—▷⊢—    **V2**

**R**

Assume that $V_f = 1V$ and $R = 100\Omega$.

11. (8 points) If $V_1 = 2V$ and $V_2 = 5V$, what is $V_3$?
    A. 2 V    B. 3 V    C. 4 V    D. 5 V    E. Answer not shown

12. (8 points) If $I_D = 20\ mA$, $V_3 = 10\ V$, what is $V_1$?
    A. 8 V    B. 9 V    C. 10 V    D. 11 V    E. Answer not shown

Consider the following circuit:

$$R$$

$$V1 \text{—}\mathord{\wedge\mathord{\wedge\mathord{\wedge}}}\text{—} V2$$

$$I$$

13. (7 points) Given $R = 500\Omega$, $V_1 = 7V$ and $V_2 = 3V$. What is $I$?

    A. 4 $mA$    B. 8 $mA$    C. 14 $mA$    D. 18 $mA$    E. Answer not shown

14. (7 points) Given $R = 250\Omega$, $V_1 = 6V$ and $I = 10mA$. What is $V_2$?

    A. $-2.5\ V$    B. 2.5 $V$    C. 3.5 $V$    D. 8.5 $V$    E. Answer not shown

Consider the following circuit:

**9 V**

**R1**

**V1**

**R2**

**5 V**
15. (8 points) Assume that $R_1 = 300\Omega$ and $R_2 = 100\Omega$. What is $V_1$?

    A. 1 $V$    B. 3 $V$    C. 6 $V$    D. 8 $V$    E. Answer not shown

Part III. Circuits and Code

Consider the following circuit:

Assume $R_0 = 50\Omega$, $R_1 = 150\Omega$ and the maximum voltage output by a microprocessor pin is $5V$. Also assume that D0/D1 have been configured as output pins.

16. (8 points) If $PORTD\_PDOR = 0x00$, what is $V$?

A. $0\ V$    B. $1.25\ V$    C. $2.5\ V$    D. $3.75\ V$    E. Answer not shown

17. (8 points) If $PORTD\_PDOR = 0x2$, what is $V$?

A. $0\ V$    B. $1.25\ V$    C. $2.5\ V$    D. $3.75\ V$    E. Answer not shown

Consider the following circuit and associated function:

```c
int control (uint32_t mask, uint32_t count)
{

  for(int i = 0; i < count; ++i)
  {
    GPIOC_PDOR = 0;
    delay(3);
    GPIOC_PDOR = mask;
    delay(1);
  }
}
```

Assume that the motor can be modeled as a 1Ω resistor and that positive current flow is indicated by the arrow.

18. (6 points) What is the correct initialization for GPIOC_PDDR?
    A. 0xF    B. 0x64    C. 0x68    D. 0xD8    E. Answer not shown

19. (8 points) When control(0x4F, 1000) is called, at what duty cycle is the motor being driven?
    A. 0%    B. 25%    C. 50%    D. 100%    E. Answer not shown

20. (8 points) When control(0x71, 1000) is called, at what duty cycle is the motor being driven?
    A. 0%    B. 25%    C. 50%    D. 100%    E. Answer not shown

21. (8 points) When control(0x95, 1000) is called, what is the average current through the motor while the function is executing?
    A. −5 A    B. −1.25 A    C. 1.25 A    D. 5 A    E. Answer not shown

Part IV.  Control

Consider the following P-D control law for lateral control of your hovercraft:

$$f_x = K_{lp}(x_d - x) + K_{lv}(\dot{x}_d - \dot{x})$$
$$f_y = K_{lp}(y_d - y) + K_{lv}(\dot{y}_d - \dot{y})$$

where $x$, $y$, $\dot{x}$ and $\dot{y}$ are the sensed state of the hovercraft.

Assume that positive positions and forces are forward for the $X$ direction and to the left for the $Y$ direction.

22.  (6 points) In order to achieve critical damping, what is the sign of $K_{lp}$?
     A. $K_{lp} > 0$     B. $K_{lp} < 0$

23.  (6 points) The $x_d$ term in the control equation can best be described physically as:
     A. a spring     B. a velocity     C. a position     D. friction
     E. Answer not shown

24.  (6 points) Suppose that the hovercraft oscillates around the goal position. Assuming that we keep $K_{lp}$ constant, how should we change $K_{lv}$?
     A. Decrease it     B. No change     C. Increase it

25.  (6 points) Which of the following is always true with respect to your project 8, 9 and 10 implementations?
     A. $K_{lp} = 0$     B. $K_{lv} = 0$     C. $\dot{x} = 0$     D. $\dot{x}_d = 0$     E. Answer not shown

Part V. Interrupt Service Routines

Consider the following code:

```
volatile uint8_t a = 1;
volatile uint8_t b = 1;

void myISR() {
  static uint8_t c = 0;

  ++c;
  if(c == b) {              // equal
    c = 0;
  }

  if(c == 0) {              // equal
    GPIOD_PDOR |= 0x40;     // OR equal
  }

  if(c == a) {              // equal
    GPIOD_PDOR &= ~0x40;    // AND equal not
  }

}

int setup() {
  // Configure PORTD, bit 6 to be digital I/O
  PORTD_PCR6 = PORT_PCR_MUX(0x1);
  // Configure bit 6 to be an output
  GPIOD_PDDR = 0x40;

  // Configure the timer
  Timer1.initialize(1000);
  Timer1.attachInterrupt(myISR);
  Timer1.start();

}

loop() {
}
```

26. (5 points) True or false: this is an example of an external interrupt.
    A. True    B. False

27. (8 points) What is the interrupt frequency?
    A. $10\ Hz$    B. $100\ Hz$    C. $1,000\ Hz$    D. $10,000\ Hz$    E. Answer not shown

28. (8 points) When $a = 5$ and $b = 20$, what is the frequency of the signal at PORT D, pin 6?
    A. $4\ Hz$    B. $50\ Hz$    C. $200\ Hz$    D. $1,000\ Hz$    E. Answer not shown

29. (8 points) When $a = 10$ and $b = 50$, what is the duty cycle of the signal at PORT D, pin 6?
    A. 0%    B. 20%    C. 50%    D. 100%    E. Answer not shown

Part VI. Serial Processing

The following function is to change upper case letters to lower case and lower case letters to upper case, and otherwise leave the character unchanged:

```
1   char flip_case (char c)
2   {
3     if (c >= 'a' && c <= 'z')
4     {
5       c = c - 'a' + 'A';
6     }
7     else if (c >= 'A' && c <= 'Z')
8     {
9       c = c + 'A' - 'a';
10    }
11    return (c);
12  }
```

30. (8 points) On which line is the bug?

    A. 3    B. 5    C. 7    D. 9    E. Answer not shown

31. (5 points) True or False: a shared clock is used in a synchronous serial protocol.

    A. True    B. False

Part VII. Digital-Analog Systems

32. (6 points) Of the analog-to-digital conversion approaches that we studied, which takes the shortest period of time to complete the conversion?

   A. Flash Analog-to-Digital Conversion    B. Successive Approximation
   C. They are equal

33. (6 points) Assume a 4-bit digital-to-analog converter with a range of 0 to 5 volts. What is the resolution of the converter?

   A. $1/51\ V$    B. $1/15\ V$    C. $1/3\ V$    D. $5\ V$    E. Answer not shown

34. (8 points) Assume an 8-bit digital-to-analog converter with a range of 0 to 5 volts. What voltage corresponds to a digital value of 102?

   A. $2/255\ V$    B. $2/15\ V$    C. $2/5\ V$    D. $2\ V$    E. Answer not shown

35. (8 points) Assume an 8-bit analog-to-digital converter that uses the successive approximation algorithm, and has a range of 0 to 5 volts. If $V_{in} = 1\ V$ and the first guess by successive approximation is 1000 0000, what is the fifth guess?

   A. 0011 0010    B. 0011 0011    C. 0011 0100
   D. 0011 1000    E. Answer not shown

Part VIII. Finite State Machines

Consider the following block of code that implements part of a FSM that controls our hovercraft. This part is to move forward until a wall is detected, make a turn, and then continue moving forward.

Assume that all global variables are already defined.

```
1     static State state = A;
2
3     switch(state)
4     {
5       case A:
6           fan.write(80);
7           desired_velocity[0] = .2;
8           desired_velocity[1] = 0;
9           state = B;
10          break;
11
12      case B:
13          if(distance_front > .4)
14          {
15            desired_velocity[0] = 0;
16            desired_velocity[1] = 0;
17            state = C;
18            counter = 0;
19          }
20          break;
21
22      case C:
23          counter++;
24          if(counter > 100)
25          {
26            heading_goal = heading_goal + 90.0;
27            if(heading_goal > 180.0)
28              heading_goal -= 360.0;
29            state = D;
30          }
31          break;
32
33      case D:
34          if(heading_error < -DB || heading_error > DB)
35          {
36            desired_velocity[0] = .2;
37            desired_velocity[1] = 0;
38            state = E;
39          }
40          break;
41          :
42    }
```

36. (8 points) Which of the following lines of code has a bug?

  A. 7    B. 9    C. 13    D. 17    E. These lines are bug-free

37. (8 points) Which of the following lines of code has a bug?

  A. 23    B. 27    C. 28    D. 34    E. These lines are bug-free
38. (25 points) You are designing a Finite State Machine to land a craft on the surface of the moon. The rules are:

   1. The craft must land between the two flags at a horizontal speed ($\dot{x}$) no more than $V_x$ and a vertical speed ($\dot{z}$) no more than $V_z$.
   2. The horizontal positions of the left and right flags are $X_L$ and $X_R$, respectively.
   3. Positive $X$ is to the right; positive $Z$ is up. Orientation is not a concern.
   4. Assume inertia is small relative to the capabilities of the thrusters.
   5. Assume that the initial $z$ is high relative to the flags.
   6. The landing process must happen in the following phases:
      (a) Stabilize vertical velocity
      (b) Move between the flags
      (c) Stabilize horizontal velocity
      (d) Landed

      Once one phase is complete, you may assume that its conditions will then be satisfied for the duration of the landing procedure. For example, once the vertical velocity of the craft is stabilized, then this will be true until landing.

The events are as follows:

   - $x < X_L$
   - $x > X_R$
   - $\dot{x} > V_x$
   - $\dot{x} < -V_x$
   - $\dot{z} < -V_z$
   - $z == 0$

Note that you may take the "not" of any event, too.

The actions are as follows:

   - Accelerate left briefly (L)
   - Accelerate right briefly (R)
   - Accelerate up briefly (U)
   - No thrust (X)

Draw the Finite State Machine that controls the craft.
